Allowable Subject Matter

1. Claims 1, 2 and 5-10 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant has claimed a device for performing reactions on samples. The device is comprised of a support plate (1) and a detachable cover (2). The support plate has a plurality of cavities (11) in rows that are regularly arranged in a repeated raster and adapted to receive microbeads (12). The detachable cover (2) has barriers (21) of a defined width that cover and space apart at least one of the cavities so that capillary gaps (3) are formed between the microbeads projecting out from the cavities and the barriers of the cover. The barriers (21) of the cover are separated by recesses (22). The recesses are wide enough to ensure that capillary forces may not hold material in the recesses. The Examiner considers Garyantes to be the closest prior art. Garyantes teaches a fluid transfer system comprised of an upper plate having pins with tips used to transfer fluids and a lower plate having virtual wells or indentations. Garyantes does not teach the feature of a capillary gap formed between the upper plate pins and microbeads that are in the cavities of the lower plate when the two (upper and lower) elements are brought together.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
